## 第3次作業-作業-HW3

學號:109111101 姓名:邱韋翔

作業撰寫時間:10 (mins,包含程式撰寫時間)

最後撰寫文件日期: 2022/11/7

本份文件包含以下主題:(至少需下面兩項,若是有多者可以自行新增)

- ■說明內容
- ■個人認為完成作業須具備觀念

## 說明程式與內容

拉取工具箱中的下拉式選單也就是 DropDownList 下段程式碼則為使用後結果:

```
c%@ Page Language="C#" AutoEventWireup="true" CodeBehind="Test.aspx.cs" Inherits="
<!DOCTYPE html>
chtml xmlns="http://www.w3.org/1999/xhtml">
chead runat="server">
cmeta http-equiv="Content-Type" content="text/html; charset=utf-8"/>
   <title></title>
</head>
<form id="form1" runat="server">
       <div>
            <asp:DropDownList ID="ddl Category" runat="server" OnSelectedIndexChan</pre>
            <asp:DropDownList ID="ddl Food" runat="server"></asp:DropDownList>
        </div>
   </form>
:/body>
</html>
```

給予兩個String型別的list在運用for迴圈給DropDownList下拉式選單添加清單,在運用DropDownList.SelectIndex抓取選的值及PostBack的特性,讓操作者選取的值隨時更新。下段程式碼則為使用後結果:

```
public partial class Test : System.Web.UI.Page
{
```

about:blank 1/2

```
string[] sa_Cat = new string[2] {"蔬菜","水果"};
string[,] sa_2D = new string[2,2] { {"A菜", "空心菜"}, {"番茄","火龍果" } };
protected void Page_Load(object sender, EventArgs e)
    if (!IsPostBack)
    {
        for (int i_Ct = 0; i_Ct < sa_Cat.Length; i_Ct++)</pre>
            ListItem o L = new ListItem();
            o_L.Text = o_L.Value = sa_Cat[i_Ct];
            ddl Category.Items.Add(o L);
        mt GenSecondList();
    }
}
protected void ddl_Category_SelectedIndexChanged(object sender, EventArgs
{
    mt_GenSecondList();
}
protected void mt_GenSecondList()
    int i_ind = ddl_Category.SelectedIndex;
    ddl Food.Items.Clear();
    for (int i_Ct = 0;i_Ct< sa_2D.GetLength(1); i_Ct++)//sa_2D.GetLength(1</pre>
    {
        ListItem o L = new ListItem();
        o_L.Text = o_L.Value = sa_2D[i_ind,i_Ct];
        ddl Food.Items.Add(o L);
    }
}
```

## 個人認為完成作業須具備觀念

}

須了解DropDownList的物件控制,給予對應控制物件的指令即可

about:blank 2/2
